

An ALURE (Authentic Large-Scale Undergraduate Research Experience) for Your Students:
Designing for Success Using Learnings from a
Multi-Institutional, Multi-Disciplinary Project

Susan Rowland

Associate Professor (Teaching Focused)
School of Chemistry and Molecular Biosciences
Deputy Director, Institute for Teaching and Learning Innovation (ITaLI)

CRICOS Provider No 00025B

Structure for today

- Identification of attendees who are thinking of designing a large-scale URE (and a room reshuffle?)
- Introduction to ALURE
- Workshop design time interspersed with short presentations and feedback from critical friends and supporters

CRICOS Provider No 00025B

While we move around (or not)....

- Identify a large group of your students who might benefit from a URE
- What could they research?
- Why would it interest them?
- Who else cares about the results? (who can they tell?)

CRICOS Provider No 00025B

Team ALURE

Authentic Large-Scale Undergraduate Research Experiences

Team ALURE

From left Dr Susan Rowland - Primary Project Leader (s.rowland1@uq.edu.au), Co-leaders Dr Gwen Lawrie and Dr Kirsten Zimbardi, Team members Dr Jack Wang and Dr Paula Myatt, and Project manager Mr Peter Worthy Research officer Rhianna Pedwell

 **ALURE** PROJECT

Project Impact

We identified and documented, or implemented and evaluated 21 ALUREs. Eleven were developed in association with the authorship team. This represents an annual engagement of over 7000 undergraduate students in authentic research. We also built a nationwide Community of Practice of 39 academics, some of whom have formed new mentor-mentee relationships, and have received recognition for their teaching and learning contributions.

Deliverables

- The Implementer's Checklists for novice implementers designing and developing an ALURE
- Detailed exemplars of the implementer experience in ALUREs from around Australia
- An evaluation instrument trialled in multiple course evaluations
- Artefacts from ALURE implementations; protocols, task descriptions, and student work
- Exemplar data on the impact of ALUREs on student perceptions and attitudes towards research and their learning gains

Support for this project has been provided by the Australian Government Office for Learning and Teaching.
The project participants are gratefully acknowledged.

Lead Institution:

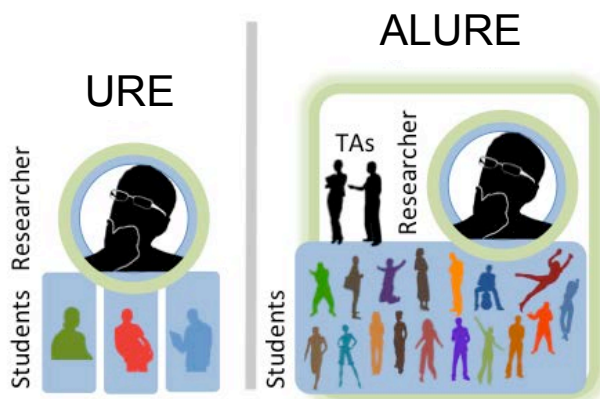

THE UNIVERSITY OF QUEENSLAND
AUSTRALIA

What is an ALURE?

- Hands-on research in the **undergraduate-course** laboratory, clinic, or workshop
- Projects are part of **authentic** research initiatives and results are communicated to “someone who cares”
- Allows **many students** to participate in research
- **Varies** by year level, desired learning outcomes, and discipline – no single model

The ALURE Model

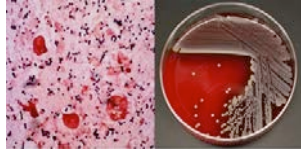

CRICOS Provider No 000258

Why is ALURE “Authentic”?

<i>Aspect or Definition of Authenticity</i>	<i>Count</i>
Experience of what scientists “do” (practices), how science is done, and what science “is”	15
Ownership/personal relevance to student	7
Experimental design; question/hypothesis, including by students	6
Results are novel/publishable/contribute to existing research; communication of results	4 each
Critical thinking	3
Data analysis; peer teamwork; interested audience	2 each
One project for the course duration; “Emerges” from constituent parts of experience; extended participation time; “open investigations”; “ill-structured and complex goals”; appropriate for the learner education level	1 each

Physiology – 200 students examine the effects of eating dark chocolate on their mental acuity

Physiology – 200 students examine the effects of eating dark chocolate on their mental acuity

What about student learning gains?

- Students perceive multiple learning gains and changes in professionalism
- Students see this activity as authentic to the practice of science
- Some students volunteer to help the lab staff prepare; others bring protocols and ideas from their part-time jobs for the project
- Academics note a change in the types of questions that students ask
- Students use this activity as a way of differentiating themselves when applying for positions in labs, for international study, and for higher degree programs
- Students who complete optional 4th year Honours degree in SCMB BSc are predominantly ALURE participants

ALURE Project
Implementer's Checklist - Design & Logistics

Implementer's Checklists

- Design and Logistics
- Motivation and Value
- Support for Students
- Evaluation

Let's work on a design for you and your students

ALURE Project
Implementer's Checklist - Design & Logistics

- 1) What students will you design for?
 - Why these students?
 - Learning Objectives?
- 2) What research question will they address? (Report out)
- 3) Why is this research question important? Who cares?

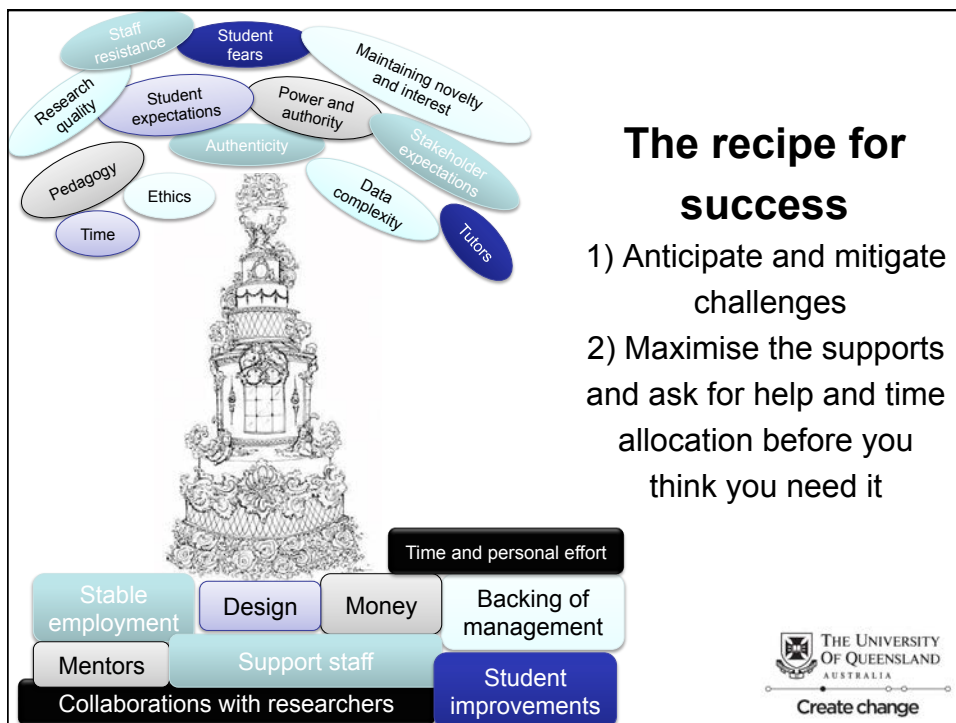

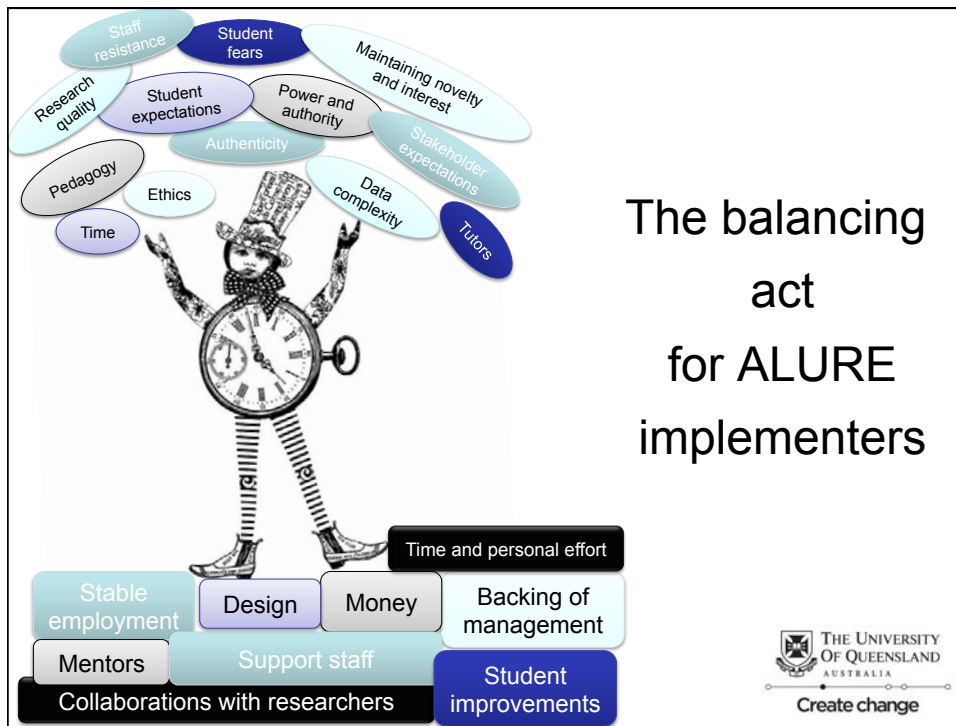

All resources are available at alure-project.net

What supports and challenges do you anticipate?

The illustration features two main elements on a light blue background. On the left is a whimsical character whose body is a pocket watch. The character has a face with a crown, arms raised, and legs with striped socks and shoes. Above the character are five black stars. On the right is a highly detailed, multi-tiered cake with intricate decorations and a crown on top.
